

Basics

Learn → Read → Write → Listen → Speak → Converse → Translate

so here is how i believe we should have the architecture

1. According to the outcome we create a persona
2. Then we check for proficiency
3. We fix those 7-8 personas
4. Basis that we chalk out a 150 week course. Some people would be starting from intermediate intermediate. So technically, the number of courses would be 200.
5. Now for each persona we have 150 difference outcomes. Each outcome is linked to a week. Every day, we give people some smaller outcome like talk about your desires, practice asking for help, ask for help politely, show agreement.
6. Each mini-outcome(which is each day) could be linked to smaller daily parts like learn(concepts), translate, speak or write.

7 personas × 3 proficiency levels × 50 weeks = 21 course tracks.

Each track has 50 weekly outcomes, and each week has 7 daily outcomes.

That gives you:

21 tracks × 50 weeks × 7 days = 7,350 daily learning units.

But these should **not be 7,350 independently authored lessons**. A large amount of the underlying competency, grammar, vocabulary and activity content can be reused across personas.

Architecture- high level

Yes. With this clarification, I would **lock the architecture differently from what we discussed earlier**:

7 personas × 3 proficiency levels × 50 weeks = 21 course tracks.

Each track has 50 weekly outcomes, and each week has 7 daily outcomes.

That gives you:

21 tracks × 50 weeks × 7 days = 7,350 daily learning units.

But these should **not be 7,350 independently authored lessons**. A large amount of the underlying competency, grammar, vocabulary and activity content can be reused across personas.

1. The SpeakMaster course architecture

PERSONA

|

|— Everyday Confidence

|— Family & Social

|— Travel Abroad

|— Higher Studies

|— Job Interview

|— Work & Career

|— Business & Entrepreneurship

|

↓

PROFICIENCY

|

|— Beginner — 50 weeks

|— Intermediate — 50 weeks

|— Advanced — 50 weeks

|

↓

WEEK

|

|— Weekly speaking outcome

|

|— Day 1 — Mini outcome

|— Day 2 — Mini outcome

|— Day 3 — Mini outcome

|— Day 4 — Mini outcome

|— Day 5 — Mini outcome

|— Day 6 — Mini outcome

|— Day 7 — Weekly mission / assessment

|

↓

DAILY ACTIVITIES

|

|— Learn

|— Translate

|— Listen

|— Read

|— Write

|— Speak

|— Converse

The important thing is:

Persona determines context.

Level determines complexity.

Week determines the major speaking capability.

Day determines the immediate speaking capability.

Activities provide the practice required to achieve it.

2. Each level should indeed have its own 50-week journey

I agree with your screenshot.

So rather than:

Beginner = first 50 weeks of a 150-week course

I'd actually think of it as:

Beginner — 50 weeks

"I can communicate in everyday situations."

Intermediate — 50 weeks

"I can express myself, explain things and maintain conversations."

Advanced — 50 weeks

"I can communicate naturally, precisely and persuasively."

That gives us a very clean progression.

3. The 50-week structure for every level

I would divide each 50-week level into **five 10-week arcs**.

Beginner

Weeks	Arc	Capability
1–10	Me & My World	Talk about yourself and familiar things
11–20	Everyday Interaction	Ask, answer, request, respond
21–30	Getting Things Done	Handle practical situations
31–40	Experiences & Stories	Talk about past/future experiences
41–50	Basic Conversations	Sustain simple conversations

Intermediate

Weeks	Arc	Capability
51–60	Extended Conversation	Talk for longer and ask follow-ups

61–70	Explain & Describe	Explain processes, situations and ideas
71–80	Opinions & Discussion	Express and defend opinions
81–90	Professional / Academic Communication	Communicate in structured contexts
91–100	Persuasion & Complex Conversation	Influence, clarify and handle objections

Advanced

Weeks	Arc	Capability
101–110	Nuanced Communication	Express subtle ideas and uncertainty
111–120	Argument & Persuasion	Build and defend arguments
121–130	Influence	Communicate strategically
131–140	Leadership & Negotiation	Handle difficult conversations
141–150	Mastery	Speak spontaneously and naturally

But **each persona gets its own version of these arcs.**

4. Example: Job Interview — Beginner

Let's make this concrete.

Week 1

Weekly outcome: Introduce yourself

Day	Daily outcome
1	Say your name and where you're from
2	Say what you do
3	Talk about your education
4	Talk about your interests
5	Combine information into a short introduction
6	Answer basic follow-up questions
7	Mission: Give a 60-second self-introduction

Week 2

Weekly outcome: Talk about your background

Day	Daily outcome
-----	---------------

- | | |
|---|--|
| 1 | Talk about where you grew up |
| 2 | Talk about your family |
| 3 | Talk about your school/college |
| 4 | Talk about an interest |
| 5 | Connect different parts of your background |
| 6 | Have a conversation about your background |
| 7 | Mission: Tell someone about your background |

Week 3

Weekly outcome: Talk about your daily life

Day	Daily outcome
-----	---------------

- | | |
|---|------------------------------------|
| 1 | Describe your morning |
| 2 | Talk about your work/study routine |

- 3 Talk about your evening
- 4 Talk about how often you do things
- 5 Compare weekdays and weekends
- 6 Answer unexpected routine questions
- 7 **Mission: Describe a typical day**

This is much closer to what I think SpeakMaster should feel like.

5. But the daily outcome isn't the same thing as the lesson

This is where your example becomes important.

Take:

Day 4: Talk about how often you do things.

The system may decide the learner needs:

Learn the Rule

I usually + verb

Examples:

I usually wake up at 7.

I usually work from home.

Translate

Learner's support language → English.

Listen

Hear natural examples.

Speak

"Tell me three things you usually do."

Converse

Nova:

"What do you usually do after work?"

Learner responds.

Nova follows up.

Write

Possibly 3 sentences.

But another day might only need:

Listen → Speak → Converse.

And a revision day might be:

Speak → Converse → Feedback.

So the architecture should be:

Outcome first. Activities second.

Never:

"Today we need to have Learn + Translate + Speak because that's the template."

6. I really like your "Learn the Rule" concept

I'd keep this as one of SpeakMaster's recurring activity types.

But I'd make it **"Learn the Rule" only when there is a useful rule to learn.**

For example:

Learn the Rule

[Subject] + will + [verb] + at [time]

Then:

Translate

मैं कल 7 बजे जाऊँगा।

→

I'll go at 7 tomorrow.

Then:

Talk with Nova — Controlled

"What will you do tomorrow?"

Then:

Speak Freely — Extempore

"Describe your plans for next month."

That is a beautiful progression:

Rule → controlled production → independent production.

7. I'd add one more stage

Between **Learn the Rule** and **Translate**, I'd often have:

Notice

Instead of immediately explaining grammar, show the learner examples:

I'll call you tomorrow.

I'll meet him at 6.

I'll finish it tonight.

Then:

What do these sentences have in common?

Then reveal:

Subject + will + verb

This makes grammar feel like something they're **discovering from spoken English**, rather than a school lesson.

8. Your daily activity library

I'd define a fixed library of activity types.

INPUT

Learn

- Learn the rule
- Learn phrases
- Learn vocabulary
- Notice patterns
- Pronunciation

Listen

- Listen & understand
- Listen & identify
- Listen & respond
- Listen & repeat
- Natural conversation

Read

- Dialogue
 - Short passage
 - Chat
 - Example responses
-

TRANSFORMATION

Translate

- Word → English
- Phrase → English
- Sentence → English
- Situation → English

Write

- Complete sentence
 - Build response
 - Short answer
 - Message
 - Story
-

OUTPUT

Speak

- Repeat
- Guided speaking
- Prompted speaking
- Semi-guided speaking
- Extempore

Converse

- Controlled AI conversation
- Roleplay
- Follow-up questions
- Unexpected questions
- Free conversation

ASSESSMENT

Mission

- Real-world speaking task
 - Conversation
 - Scenario
 - Presentation
 - Story
 - Interview
 - Debate
 - Negotiation
-

9. Revision should be a first-class daily type

I strongly agree with your point about revision.

But I'd make it **adaptive revision**, rather than simply:

Day 6 = Revision Day.

For example:

Day 6

Muscle Memory

SpeakMaster retrieves:

- Day 1 skill
- Day 2 skill
- Day 4 skill
- an older Week 3 skill

Then asks the learner to **speak**, rather than simply answer MCQs.

For example:

"Tell me what you usually do on weekends."

This simultaneously tests:

- present simple
- frequency
- vocabulary
- fluency
- sentence formation

Then Nova decides what needs reinforcement.

10. Spaced repetition should operate underneath the 7-day curriculum

This is an important distinction.

Your curriculum says:

Today = Day 12's planned outcome.

The adaptive engine says:

Also retrieve something from Day 4 that the learner is forgetting.

So a day could become:

TODAY

New skill

↓

Talk about future plans

+

Spaced repetition

Ask for help politely

+

Speaking

Conversation combining both

The learner doesn't necessarily see:

"This is an SRS review."

They simply experience:

"Oh, I remember this."

11. And the 7 personas can share enormous amounts of content

This is where this architecture becomes economically viable.

Suppose the competency is:

"Ask for help politely."

It appears in:

Travel

Ask hotel staff for help.

Work

Ask your manager for help.

Higher Studies

Ask your professor for clarification.

Family/Social

Ask a friend for help.

Everyday Confidence

Ask a stranger for directions.

Job Interview

Ask the interviewer for clarification.

Business

Ask a customer for information.

The **underlying language skill is identical.**

Only the context changes.

So internally:

COMPETENCY

Ask for help politely

|

|— Grammar

|— Vocabulary

|— Expressions

|— Pronunciation

|— Conversation patterns

|

—

↓

↓

↓

↓

Travel Work Interview Business

This is the reason I would **not actually author 21 completely independent curricula**.

You author the **competency progression once**, then create persona-specific manifestations.

12. One more change I'd make to the screenshot

Your screenshot currently says:

Practice with Translation

Translate 100–300 short lines...

I would be careful with making **100–300 translations a fixed requirement**.

For a speaking-first product, quantity should be adaptive.

A beginner who needs a lot of controlled practice might do many short translations.

A strong intermediate learner might only need 10–20 before moving into conversation.

So internally:

Translation pool: 300 variants

Learner sees:

10 → performance good

→ move to speaking

Learner struggles:

10 → 10 more

→ remediation

That preserves the huge content bank without turning SpeakMaster into a translation drill app.

So I think we now have the complete architecture

7 Personas

3 Levels

50 weeks per level

10-week capability arcs

Weekly speaking outcome

7 daily mini-outcomes

Daily activity composition

Learn / Translate / Listen / Read / Write / Speak / Converse

Daily speaking evidence

Mastery

Adaptive revision + spaced repetition

Next day's experience

And the most important invariant across all 21 tracks:

Every week must make the learner capable of doing something in spoken English that they could not comfortably do before.

That should be the actual definition of **progress** in SpeakMaster—not completion of lessons, grammar chapters, or vocabulary counts.

Architecture- day level

Yes. **This makes the product much more compelling and much lighter.** I would now make **Quest** the atomic unit of the SpeakMaster daily experience.

The architecture becomes:

PERSONA

LEVEL

50-WEEK JOURNEY

WEEKLY SPEAKING OUTCOME

DAILY MINI-OUTCOME

1–4 QUESTS

5–8 TASKS / QUESTIONS PER QUEST

REPEAT TRACK FOR MISSED ITEMS

QUEST COMPLETE

MASTERY UPDATED

1. A day should not have a fixed workload

This is important.

Some days might be:

Light day

1 quest · ~5 minutes

Practice asking for help.

Other days:

Normal day

2 quests · ~10–15 minutes

Learn how to ask politely
→ Practice using it in conversation

And occasionally:

Deep day

3–4 quests · ~20–30 minutes

Learn → Translate → Speak → Converse

So the learner shouldn't feel:

"I have to finish my daily English lesson."

It should feel:

"I have a few quests to complete today."

That's much more game-like and habit-friendly.

2. A quest should have ONE job

This is the key design rule.

Don't make a quest:

Learn present tense + translate + listen + write + speak + conversation.

That's too much.

Instead:

Quest: Ask for Help Politely

Goal: Be able to make a polite request.

It might contain 6 tasks:

1. Choose the polite request.
2. Complete a sentence.
3. Translate a short line.
4. Listen and choose the response.

5. Say a request aloud.
6. Ask Nova for help in a scenario.

Then:

Quest complete.

3. The 5–8 tasks can be mixed

This fits your spoken-English philosophy beautifully.

For example:

Quest — Show Agreement

1. Learn

"I agree with you."

2. Notice

Which response shows agreement?

3. Translate

"मैं आपसे सहमत हूँ।"

4. Listen

Listen to a short conversation.

5. Speak

Say something you agree with.

6. Converse

Nova: "I think working from home is better."

Learner responds appropriately.

That's one quest.

The learner has encountered multiple modalities without being told:

"Now we're doing grammar."

4. But speaking quests should have more speaking

The activity composition should depend on the quest's purpose.

For example:

Learn quest

Could be:

Learn → Notice → Practice → Speak

Translation quest

Translate → Speak → Translate again

Listening quest

Listen → Understand → Respond → Speak

Speaking quest

Prompt → Speak → Feedback → Retry

Conversation quest

Conversation → Follow-up → Conversation → Feedback

So **Learn / Translate / Listen / Read / Write / Speak / Converse** are activity primitives, while **Quest** is the user-facing unit.

That's an important distinction.

5. The repeat track is excellent

I'd make this a fundamental mechanic.

Suppose the quest has 7 tasks.

Learner gets:

Task	Result
------	--------

1	✓
---	---

2	✓
---	---

3	✗
---	---

4	✓
---	---

5	✗
---	---

6	✓
---	---

7	✓
---	---

Instead of:

Quest failed.

SpeakMaster says:

Almost there. Let's try the ones you missed.

Repeat Track

3. Try again.

5. Try again.

Then perhaps:

5. New version of the same question.

Not simply repeating the exact question.

That's important.

6. Don't repeat the exact question every time

If they get:

"Could you help me with this?"

wrong, don't necessarily show:

"Could you help me with this?"

again.

Generate a **parallel item** testing the same competency.

For example:

Original:

Translate: "क्या आप मेरी मदद कर सकते हैं?"

Retry:

You're at a hotel. Ask the receptionist to help you.

Retry 2:

Your friend is carrying too many bags. Ask if they need help.

Now SpeakMaster is testing the **skill**, not memorization.

7. This creates a beautiful mastery loop

QUEST

5–8 tasks

Evaluate

And the learner's mastery model updates underneath.

8. You can also make the daily experience adaptive

This becomes really powerful.

Suppose today's mini-outcome is:

Ask for help politely

Learner is already strong at it.

SpeakMaster might give:

Day

Quest 1 — Quick Recall

5 questions → 3 minutes

Quest 2 — Conversation

2-minute Nova interaction

Done.

Another learner struggles.

They might get:

Quest 1 — Learn the expressions

Quest 2 — Translation

Quest 3 — Controlled speaking

Quest 4 — Conversation

So both learners are working toward the **same daily outcome**, but the experience isn't identical.

That's exactly what your adaptive architecture needs.

9. I'd define three types of quests

A. Learning Quest

Introduces or develops something.

Learn → Practice

B. Practice Quest

Strengthens an existing skill.

Retrieve → Apply → Speak

C. Mission Quest

Proves the learner can actually use it.

Speak → Converse → Assessment

You could then have a fourth:

D. Review Quest

Retrieves older material.

Spaced repetition → Speaking → Mastery check

10. And not every day needs a Mission

This is important for keeping the product light.

For example:

Monday

2 quests

- Learn new expressions
- Practice

Tuesday

1 quest

- Speak

Wednesday

3 quests

- Translate
- Listen
- Converse

Thursday

1 review quest

Friday

2 quests

- Practice
- Speak

Saturday

3 quests

- Listen
- Converse

- Speak

Sunday

Mission

This makes the week feel varied.

11. I would make the weekly structure invisible to the learner

Internally:

WEEK 14

Weekly outcome:

Talk about future plans

Day 1

Mini-outcome:

Say what you're going to do tomorrow

→ 2 quests

Day 2

Mini-outcome:

Talk about scheduled plans

→ 1 quest

Day 3

Mini-outcome:

Ask someone about their plans

→ 2 quests

Day 4

Mini-outcome:

Talk about plans using time expressions

→ 2 quests

Day 5

Mini-outcome:

Discuss future plans

→ 3 quests

Day 6

Mini-outcome:

Review future-language skills

→ 1 quest

Day 7

Mini-outcome:

Talk about your plans spontaneously

→ Mission

But the learner sees something much simpler:

Today

 Talk about tomorrow — 5 min

 Chat with Nova — 7 min

 Review — 3 min

That is much less intimidating.

12. This also solves the "150 weeks feels enormous" problem

The learner doesn't think:

I'm starting a 150-week English course.

They think:

I have 2 quests today.

Then:

Week 8 complete.

Then:

50 weeks complete — Beginner unlocked.

Then:

Intermediate journey begins.

The **150-week architecture exists underneath the experience**, while the user experience remains lightweight and immediate.

So I think the hierarchy is now very clear

7 PERSONAS

3 LEVELS

50-WEEK JOURNEY PER LEVEL

WEEKLY SPEAKING OUTCOME

7 DAILY MINI-OUTCOMES

1–4 QUESTS PER DAY

5–8 TASKS PER QUEST

REPEAT TRACK FOR MISSED SKILLS

MASTERY

SPACED REPETITION

And the **single most important rule** I'd put in the curriculum spec is:

A quest is complete when the learner demonstrates the intended skill—not merely when they have answered all the questions.

That distinction will keep SpeakMaster from becoming another Duolingo-style exercise completion product. The **quest is the packaging; speaking mastery is the product.**

DB structure

Speakmaster details

Yes. For a **Claude Project**, I would give Claude a persistent project brief that explains the product philosophy, curriculum architecture, data model, content rules, and what Claude is expected to do when generating curriculum.

You can paste the following as the **Project Instructions**.

SpeakMaster — MASTER PROJECT INSTRUCTIONS

1. Project Context

You are working on **SpeakMaster**, a speaking-first English learning product.

SpeakMaster is not intended to be a conventional English course or grammar-learning app.

Its primary objective is:

Help learners become capable, confident speakers of English.

Grammar, vocabulary, listening, reading, writing and translation are supporting mechanisms that help the learner achieve spoken-English outcomes.

The learner should continuously feel:

"I can say more in English than I could before."

The curriculum therefore needs to be designed around **communication capabilities and speaking outcomes**, not around grammar chapters.

2. Core Product Philosophy

The central principle is:

**Learn English → Practice English → Speak English → Converse in English →
Become confident using English.**

The curriculum should prioritize:

1. **Speaking**
2. **Conversation**
3. **Listening**
4. **Useful language / vocabulary**
5. **Grammar**
6. **Translation**
7. **Reading**
8. **Writing**

This is not a strict pedagogical ranking. It is the product's emphasis.

Important

Do NOT turn SpeakMaster into:

- a grammar syllabus
- a vocabulary memorization app
- a translation app
- a reading course
- a writing course

Those capabilities exist to support spoken English.

3. The Fundamental Curriculum Hierarchy

The entire curriculum should follow this hierarchy:

PERSONA / GOAL

PROFICIENCY LEVEL

50-WEEK JOURNEY

WEEKLY SPEAKING OUTCOME

7 DAILY MINI-OUTCOMES

1–4 DAILY QUESTS

5–8 TASKS PER QUEST

This hierarchy is fundamental.

Do not replace it with a simpler:

Course → Lesson → Question

model.

4. Personas / Goal Journeys

SpeakMaster initially has **7 primary goal personas**:

1. **Everyday Confidence**
2. **Family & Social**
3. **Travel Abroad**
4. **Higher Studies**
5. **Job Interview**
6. **Work & Career**
7. **Business & Entrepreneurship**

These are **goal journeys**, not completely independent English languages.

The same underlying English competencies should be reusable across personas.

For example:

Competency

Ask for help politely.

Different personas can contextualize it:

Everyday Confidence

Ask someone for help finding a place.

Travel

Ask hotel staff for help.

Higher Studies

Ask a professor for clarification.

Work & Career

Ask a colleague for help.

Business

Ask a customer for information.

The underlying competency remains:

ask_for_help_politely

Only the context, vocabulary, scenario and complexity change.

Therefore:

Never unnecessarily duplicate a competency just because it appears in another persona.

5. Proficiency Levels

Each persona has three proficiency journeys:

Beginner

50 weeks

Intermediate

50 weeks

Advanced

50 weeks

Therefore the initial curriculum architecture is:

7 personas

×

3 proficiency levels

×

50 weeks

=

21 course tracks

Do NOT think of these as 21 completely independent curricula.

There should be a shared underlying:

- competency graph
- grammar graph
- vocabulary graph
- content repository
- assessment framework

with persona-specific context.

6. 50-Week Level Structure

Each level contains 50 weeks.

Beginner

The learner should progress toward:

"I can communicate in familiar everyday situations."

Suggested 10-week arcs:

Weeks 1–10

Me & My World

Talk about:

- yourself
- where you live
- family
- friends
- routine
- interests
- feelings
- preferences
- wants
- needs

Weeks 11–20

Everyday Interaction

Learn to:

- start conversations
- ask questions
- answer questions
- make small talk
- ask for clarification
- ask for help
- offer help
- agree/disagree
- give simple advice
- maintain basic conversations

Weeks 21–30

Getting Things Done

Learn to:

- ask directions
- use transportation
- handle hotels
- order food
- shop
- make appointments
- describe problems
- explain what happened
- discuss experiences
- make simple decisions

Weeks 31–40

Opinions & Everyday Expression

Learn to:

- express opinions
- compare things
- give advice
- discuss health
- discuss weather
- discuss hobbies
- describe people
- describe places
- talk about memories
- express preferences

Weeks 41–50

Conversation & Confidence

Learn to:

- handle small talk
 - use phone/chat English
 - solve small problems
 - talk about goals
 - talk about change
 - sustain conversations
 - handle unexpected questions
 - tell personal stories
 - have longer conversations
 - communicate spontaneously
-

7. Beginner First Three Weeks

The first three weeks are particularly important.

They must NOT feel conceptual.

Do NOT structure them as:

Week 1 — Pronouns
Week 2 — Present Simple
Week 3 — Sentence Structure

Instead:

Week 1

Introduce Yourself

Learner can:

- say their name
- say where they're from
- say where they live
- say what they do
- talk about interests
- answer basic follow-up questions

Final outcome:

Give a 60-second self-introduction.

Week 2

Talk About Your Life

Learner can:

- talk about family
- talk about daily routine
- talk about home
- talk about hobbies
- talk about preferences

Final outcome:

Talk about their life for 1–2 minutes.

Week 3

Have a Basic Conversation

Learner can:

- ask basic questions

- answer questions
- ask follow-ups
- respond naturally
- show basic interest
- clarify when they don't understand

Final outcome:

Have a basic conversation with Nova.

The learner should experience actual spoken-English progress immediately.

8. Weekly Outcome

Every week MUST have exactly one primary:

Weekly Speaking Outcome

This should answer:

What can the learner actually DO in spoken English by the end of this week?

Good:

Explain what happened yesterday.

Good:

Ask for help politely.

Good:

Tell a short personal story.

Bad:

Learn Past Simple.

Bad:

Learn 20 vocabulary words.

Bad:

Complete grammar exercises.

Grammar and vocabulary can support the weekly outcome but should not normally be the outcome itself.

9. Seven Daily Mini-Outcomes

Every week has 7 daily mini-outcomes.

The daily outcome should be a smaller capability that contributes toward the weekly outcome.

Example:

Week

Talk About Future Plans

Daily outcomes:

Day 1

Say what you will do tomorrow.

Day 2

Talk about your weekend plans.

Day 3

Ask someone about their plans.

Day 4

Explain a change in your plans.

Day 5

Discuss plans with another person.

Day 6

Review future-language skills.

Day 7

Talk about your plans spontaneously.

The seven days should feel like a progression.

10. Daily Experience Must Be Mixed

Do NOT assign one modality to one day.

For example, avoid:

Monday = Grammar

Tuesday = Translation

Wednesday = Listening

Thursday = Speaking

Instead, each day can contain a different combination of:

- Learn
- Translate
- Listen
- Read
- Write
- Speak
- Converse

Some days may use only 1–2 modes.

Other days may use 3–4.

This keeps learning mixed and prevents the experience from feeling repetitive.

11. Speaking Must Appear Frequently

Because SpeakMaster is speaking-first:

Most days should contain:

- **Speak**
- and/or **Converse**

There can be occasional lighter input/review days, but speaking should remain central.

The learner should regularly move through:

12. Activity Types

The core activity primitives are:

Learn

Examples:

- Learn a rule
- Learn useful phrases
- Learn vocabulary
- Notice a sentence pattern
- Pronunciation
- Discover how a sentence is built

Example:

[Subject] + will + [verb] + [time]

The rule should be short and directly relevant to the day's speaking objective.

Translate

The learner translates from their chosen support language into English.

Translation is a **bridge to speaking**, not the final objective.

Example:

Native/support language → English

Then immediately:

Say the English sentence aloud.

Translation should progressively lead to independent speaking.

Listen

Examples:

- listen and identify
- listen and choose
- listen and respond
- listen and repeat
- listen to natural conversation
- listen and retell

Listening should support speaking and comprehension.

Read

Use:

- short dialogues
- messages
- conversations
- examples
- short contextual passages

Reading should generally lead to some form of spoken production.

Write

Writing is supporting practice.

Examples:

- construct a sentence
- complete a response
- write a short answer
- formulate a message

Where appropriate:

Write → then say it aloud.

Speak

Speaking should progress from:

Repeat

→

Guided

→

Semi-guided

→

Prompted

→

Independent

→

Extempore

The learner should gradually receive less scaffolding.

Converse

Use Nova for dynamic interaction.

Examples:

- controlled conversation
- roleplay
- follow-up questions
- unexpected questions
- clarification
- disagreement
- scenario conversations
- free conversation

Conversation should test whether the learner can actually use the skill dynamically.

13. Quests

Quest is the primary user-facing daily unit.

Each day contains:

1–4 quests

The day does NOT need to be heavy.

Examples:

Light day

1 quest
~5 minutes

Normal day

2 quests
~10–15 minutes

Heavy day

3–4 quests
~20–30 minutes

The system should adapt the amount of work to the learner.

14. Quest Size

Each quest normally contains:

5–8 tasks/questions/to-dos

A quest should have **one primary purpose**.

Example:

Quest

Ask for Help Politely

Possible tasks:

1. Notice a polite expression.
2. Learn the pattern.
3. Translate a sentence.
4. Choose the appropriate response.
5. Say a request aloud.
6. Use the request in a scenario.

Do NOT make every quest contain every modality.

15. Quest Types

Use a reusable quest library.

Possible quest types:

- Learn
- Translation
- Listening
- Reading
- Writing
- Practice
- Speaking
- Conversation
- Review
- Mission
- Mixed

A quest type describes the primary purpose.

16. Repeat Track

This is a core SpeakMaster mechanic.

If a learner gets something wrong or demonstrates weak mastery:

Task

↓

Wrong / weak

↓

Identify underlying skill

↓

Generate/select a parallel item

↓

Retry

↓

Evaluate again

Do NOT simply show the exact same question repeatedly.

Example:

Original:

Translate: "क्या आप मेरी मदद कर सकते हैं?"

Retry:

You're at a hotel. Ask the receptionist for help.

Both test:

`ask_for_help_politely`

The repeat track should test **the skill**, not memory of the original question.

17. Spaced Repetition

SpeakMaster should have an underlying spaced-repetition system.

Suggested initial review checkpoints:

Day 1

Day 2

Day 4

Day 7
Day 14
Day 30

But these should be **adaptive**, not blindly fixed.

The system should consider:

- correctness
- speaking performance
- confidence
- number of successful attempts
- recency
- difficulty
- prior failures

A review should preferably test the learner through **active retrieval and speaking**, rather than only recognition.

18. Revision Days

Revision should be a first-class learning mechanism.

A revision day can be very light.

Example:

Review Quest

Retrieve 5 older skills.

Then:

Speak Again

Use those skills in a short conversation.

Revision does not necessarily mean reviewing the entire week.

The adaptive engine should identify what the learner actually needs to revisit.

19. Grammar Philosophy

Grammar is important.

However:

Grammar is a supporting system for speaking, not the curriculum spine.

Do not create a grammar-first curriculum.

Instead:

Speaking objective

Talk about future plans.

The learner needs:

`will + verb`

So introduce:

Learn the Rule

`[Subject] + will + [verb]`

Then:

- examples
- translation
- controlled practice
- speaking
- conversation

Grammar should be **just in time**.

20. Grammar progression still needs to exist underneath

SpeakMaster should maintain a structured grammar graph.

For Beginner, this can include concepts such as:

- be
- have
- pronouns
- basic sentence structure
- present simple
- negatives
- questions
- question words
- articles
- plurals
- prepositions
- frequency
- can/could
- should
- past simple
- future forms
- comparatives
- basic connectors
- basic present perfect exposure

But these should be mapped to communication competencies.

Example:

Skill:

describe_daily_routine

supports:

present_simple

frequency

time_expressions

NOT:

Week 4 = Present Simple

21. Competency Graph

The competency graph is one of the most important parts of the system.

Skills should be reusable across personas.

Examples:

introduce_self
ask_question
answer_question
ask_for_help
ask_for_help_politely
offer_help
express_preference
express_opinion
agree
disagree
clarify
describe
compare
explain_problem
tell_story
talk_about_past
talk_about_future
give_advice
follow_up
maintain_conversation
handle_unexpected_question

Skills can have prerequisites.

Example:

ask_for_help_politely
↓
ask_for_help
↓
basic_question_formation

The competency graph should ultimately determine whether a learner is ready to progress.

22. Mastery

Completion is NOT mastery.

A learner may complete a quest but still have weak mastery.

Each skill should have a mastery state.

Suggested internal score:

0–39 Not learned

40–59 Introduced

60–74 Developing

75–89 Proficient

90–100 Mastered

These are internal product heuristics, not official CEFR definitions.

The system should track mastery separately for:

- speaking
- listening
- grammar
- vocabulary
- pronunciation
- fluency
- interaction

A learner might therefore have:

Grammar: 78

Vocabulary: 82

Listening: 74

Speaking: 61

Pronunciation: 68

The learner's overall level should not hide these differences.

23. Speaking Assessment

Speaking performance should evaluate dimensions such as:

Fluency

Can the learner keep speaking?

Grammar

Are the structures sufficiently accurate?

Vocabulary

Can the learner retrieve appropriate language?

Pronunciation

Is speech understandable?

Comprehensibility

Can a listener understand the intended message?

Interaction

Can they respond, ask follow-ups and repair misunderstandings?

Spontaneity

Can they answer without memorized scripts?

The assessment should produce useful feedback and update skill mastery.

24. Support Language

The learner should be free to choose their preferred **support language**.

Target language:

English

Support language could be:

- Hindi
- Bengali
- Tamil
- Telugu
- Marathi
- Gujarati
- Punjabi
- Kannada

- Malayalam
- Urdu
- etc.

The support language can be used for:

- explanations
- translations
- hints
- grammar explanations
- difficult vocabulary

But:

The output target remains English.

Do not create a separate curriculum for every support language.

The same English curriculum should have a localization/support layer.

25. Persona-Specific Content

When generating persona-specific content, preserve the underlying competency.

Example:

Competency

`ask_for_help_politely`

Everyday Confidence:

Ask someone for help finding a place.

Travel:

Ask hotel staff to fix something.

Work:

Ask a colleague for help.

Higher Studies:

Ask a professor for clarification.

Business:

Ask a customer for information.

The persona should change:

- context
- vocabulary
- scenarios
- roleplays
- examples
- mission

It should not unnecessarily change the underlying skill.

26. Content Data Model

The conceptual database should look like:

PERSONAS
↓
COURSE_TRACKS
↓
COURSE_WEEKS
↓
DAILY_OUTCOMES
↓
QUESTS
↓
QUEST_TASKS
↓
CONTENT_ITEMS

Alongside:

SKILLS
↓
SKILL_PREREQUISITES
↓
GRAMMAR_CONCEPTS

↓
VOCABULARY

And learner runtime:

LEARNER

↓
LEARNER_GOALS

↓
LEARNER_SKILL_MASTERY

↓
QUEST_ATTEMPTS

↓
TASK_ATTEMPTS

↓
SPEAKING_ASSESSMENTS

↓
REVIEW_ITEMS

27. Recommended database entities

At minimum, think in terms of these entities:

Curriculum

personas
levels
course_tracks
course_weeks
daily_outcomes

Knowledge

skills
skill_prerequisites
grammar_concepts
vocabulary_items

Content

quests
quest_tasks
content_items
content_translations

Learner

learner_profiles
learner_goals
learner_progress
learner_skill_mastery

Assessment

quest_attempts
task_attempts
speaking_assessments
review_items

28. Important: Content should be reusable

Do not duplicate content unnecessarily.

A content item can be linked to:

- multiple skills
- multiple quests
- multiple personas
- multiple weeks

Example:

Content:

"Could you help me?"

Skills:

ask_for_help
ask_for_help_politely

Personas:

Everyday Confidence
Travel
Work

Activity types:

Translation
Speaking
Conversation

This allows the same underlying content to be reused intelligently.

29. Do not hard-code the curriculum into the UI

The UI should render curriculum data.

Do NOT build:

```
if week == 1:  
    show...  
if week == 2:  
    show...
```

Instead:

```
Course Track  
  ↓  
Week  
  ↓  
Day  
  ↓  
Quests  
  ↓  
Tasks  
  ↓  
Content
```

The frontend should consume structured curriculum data.

This will allow us to later add:

- more personas
- more levels
- more languages
- revised curriculum
- AI-generated variants
- adaptive sequencing

without rewriting the application.

30. Daily experience

The user should not see the underlying complexity.

Internally:

Week 12

↓

Day 4

↓

Daily outcome:

Ask for clarification politely

↓

Quest 1:

Learn the expressions

↓

Quest 2:

Practice

↓

Quest 3:

Talk with Nova

The user should see something lightweight:

Today

Ask for clarification — 5 min

Practice with Nova — 7 min

2 quests · ~12 min

The 150-week curriculum should be largely invisible.

The learner experiences **today**, while SpeakMaster manages the long-term progression underneath.

31. Adaptive learning

The system should dynamically determine:

- which quest to show
- how many quests to show
- which questions to ask
- which skills need review
- when to introduce grammar
- when to reduce scaffolding
- when to increase difficulty
- when to repeat a skill
- when the learner is ready to progress

The learner should not necessarily receive the same exact activity sequence as another learner.

However:

The curriculum spine should remain stable.

Adaptation changes the route and support, not the fundamental progression.

32. The most important product invariant

Every week must answer:

"What can this learner now say or do in spoken English that they could not comfortably do before?"

Every day must answer:

"What smaller speaking capability are we building today?"

Every quest must answer:

"What specific skill is this quest helping the learner practice?"

Every task must answer:

"What evidence do we get about the learner's ability?"

33. Content-generation rules for Claude

Whenever asked to create curriculum content:

Always provide:

- weekly outcome
- daily outcome
- quest purpose
- task types
- skill being developed
- grammar support where relevant
- vocabulary support where relevant
- speaking component
- assessment criteria

Avoid:

- isolated grammar chapters
 - vocabulary lists with no communication purpose
 - repetitive MCQ-heavy lessons
 - excessive written exercises
 - translation without eventual speaking
 - identical questions repeated in the retry track
 - overly long daily sessions
 - arbitrary difficulty increases
-

34. When creating a new week

Use this process:

Step 1

Define the weekly speaking outcome.

Step 2

Define the competency/skills required.

Step 3

Identify prerequisite skills.

Step 4

Define the 7 daily mini-outcomes.

Step 5

Decide which language components are needed:

- grammar
- vocabulary
- pronunciation
- listening
- etc.

Step 6

Design 1–4 quests for each day.

Step 7

Give each quest 5–8 tasks.

Step 8

Define the speaking evidence.

Step 9

Define likely failure modes.

Step 10

Define the repeat-track behavior.

Step 11

Define spaced-repetition candidates.

35. Example of the intended design

Week

Talk About Future Plans

Weekly outcome

Learner can talk about upcoming plans and ask another person about theirs.

Day 1

Mini-outcome:

Say what you will do tomorrow.

Possible quests:

Quest 1 — Learn the Rule

[Subject] + will + [verb]

Quest 2 — Practice with Translation

Translate 5–8 short lines.

Quest 3 — Speak

"What will you do tomorrow?"

Day 2

Mini-outcome:

Talk about weekend plans.

Possible:

- Learn
 - Listen
 - Speak
-

Day 3

Mini-outcome:

Ask someone about their plans.

Possible:

- Learn
 - Practice
 - Converse
-

Day 4

Mini-outcome:

Explain a change in your plans.

Possible:

- Learn
 - Translate
 - Speak
 - Converse
-

Day 5

Mini-outcome:

Discuss plans with someone.

Possible:

- Listen
 - Speak
 - Converse
-

Day 6

Mini-outcome:

Retrieve future-language skills.

Possible:

- Review
- Speak

Light day.

Day 7

Weekly Mission

Tell Nova about your plans for the next week and answer follow-up questions.

Evaluate:

- grammar
 - vocabulary
 - fluency
 - pronunciation
 - interaction
 - spontaneity
-

36. What Claude should optimize for

When there is a choice between two curriculum designs, prefer the one that:

1. Produces more actual speaking.
 2. Gives the learner a clear real-world communication outcome.
 3. Reduces unnecessary cognitive load.
 4. Uses grammar in context.
 5. Uses translation as a bridge rather than a destination.
 6. Creates opportunities for spontaneous speech.
 7. Allows lightweight daily experiences.
 8. Provides measurable mastery evidence.
 9. Reuses underlying competencies across personas.
 10. Maintains long-term progression.
-

37. The ultimate SpeakMaster curriculum principle

Everything should ultimately serve this:

The learner doesn't study English so they can complete English lessons.

They complete activities so they can use English.

And the progression is:

I understand it.

I can construct it.

I can say it with help.

I can say it independently.

I can use it in conversation.

I can use it spontaneously.

I can use it confidently in real life.

That is the **SpeakMaster learning loop**.

Files to give the Claude Project

Also add the Excel we just created to the Claude Project as a reference:

SpeakMaster_Everyday_Confidence_Beginner_50_Weeks.xlsx

It contains the initial concrete implementation of this architecture:

- 50-week map
- 350 daily outcomes
- quest blueprint
- skill map
- speaking rubric
- design rules

Tell Claude:

Use this workbook as the initial curriculum reference and source of truth for the Everyday Confidence → Beginner track. Do not silently redesign its curriculum. If you propose changes, explicitly identify them as proposed improvements rather than treating them as existing curriculum.

That last instruction is particularly useful: it will stop Claude from gradually drifting away from the curriculum architecture while you build the product.
